

Technical equipment for hydro cleaning:

Dosatron as sample – have a look for the type above

Structure of a dosage station – sample:

Working container

Container with concentrate product

In this case, the Dosatron is mixing the concentrate product with a ratio of 1,5% with demineralized water and transfer the dilution to the working container. The stirrer is working while the dosing process with a couple of minutes overrun. This picture shows a full automatic refilling process (min./max). From the working container the operator can take the mix for the different cleaning routines.
